CATALOGUE
FOR
1861,
OF
FRUIT AND ORNAMENTAL
TREES,
FLOWERING SHRUBS, ETC.,
CULTIVATED AND FOR SALE BY
WILLIAM REID,
AT HIS NURSERIES,
ELIZABETHTOWN, N. J.

NEW YORK:
PRINTED BY C. A. ALVORD,
15 VANDEWATER STREET,
1861.

PREFACE.

THE proprietor, in offering his new Catalogue, would beg leave to state, that since publishing the last edition there have been a number of new Fruits, as well as Ornamental Trees, added to his collection, including a number of new Evergreens, which are now for sale, and under propagation. He would also observe, that since he commenced business, now nearly thirty years, no expense has been spared in procuring all the new varieties of Fruits that were likely to be of value, also Ornamental Trees, making the collection at present one of the most extensive, for variety and healthy grown plants, in the United States. The home grounds contain about forty acres, closely cultivated, and under a fine state of cultivation. The soil is what is termed a heavy loam, all thoroughly under-drained and subsoiled, producing strong, vigorous-rooted plants, which transplant with much less risk than those grown on light sandy soils. Specimen Orchards have also been planted of all the different kinds of fruits, containing upwards of one thousand varieties; a great many of them having been planted in 1845, are now in fine bearing condition, which gives an opportunity to judge of their qualities, as well as proving their correctness to name. The proprietor would also beg leave to say that there shall be nothing wanting on his part, so far as practical experience and strict personal attention to all the different departments connected with the business go, to insure punctuality and correctness in the execution of orders, and in the packing and forwarding of Trees to all parts of the United States.

N. B.—The Nurseries are easy of access from New York, almost every hour of the day, by the New Jersey Railroad, foot of Cortlandt st., or the Elizabethport Ferry, from Pier No. 2 North River, arriving at Elizabethtown in one hour, the depot being within five minutes' walk of the Nursery.

The Nursery grounds being always kept in good order, nurserymen, amateurs, and others interested in the cultivation of fruits, &c., are respectfully invited to visit them in the growing season.

Orders by mail, addressed to the proprietor, or left at the Nursery, will receive prompt attention, and will be delivered in New York free of charge, or forwarded by whatever conveyance the parties ordering may designate; they will, however, after delivery into the hands of the forwarders, be at the risk of the purchaser.

REMARKS.—Particular attention having been bestowed by the proprietor for a number of years past on the cultivation of the Pear, which is cultivated extensively on both Pear and Quince stocks, he respectfully invites dealers and those interested in the planting of Orchards to examine the Trees at the Nursery.

For Orchard planting the following kinds are cultivated extensively, viz.:

Madeline, Dearborn's Seedling, Tyson, Rostiezer, Bartlett, Belle Luerative, Flemish Beauty, Louise Bonne de Jersey, Duchesse d'Angoulême, Beurré d'Anjou, Doyenné Boussock, Beurré Langelier, Andrews, Beurré Diel, Glout Moreau, Urbaniste, Vicar of Winkfield, Easter Beurré, Lawrence, Sheldon, &c., &c.

The following list contains a few of the kinds that are cultivated on the Quince stock, and can be furnished to dealers and planters by the quantity, viz.: Rostiezer, Dearborn's Seedling, Doyenné d'Été, Tyson, Stevens's Genesee, Duchesse d'Angoulême, Louise Bonne de Jersey, Beurré d'Anjou, Belle Luerative, Beurré Superfin, Beurré Diel, Vicar of Winkfield, Beurré Langelier, Glout Moreau, White Doyenné, Columbia, Beurré d'Amanlis, Bergamotte d'Esperen, Bartlett, &c.

Those varieties marked thus (*) do not grow well on the Quince.

PEARS.—NEW VARIETIES.

The following list of Pears having been lately introduced, and many of them not having yet been well tested as to quality, will be retained in the present list until further trial. Trees of nearly all of them can be furnished; some few of them have been in bearing, and some of them are likely to prove synonyms of those already known, and under cultivation.

FOREIGN GRAPES FOR VINERIES.

Black Hamburgh, | Bowood Muscat, | Golden Hamburgh.

A number of new native Grapes have been brought into notice within the last year or two, and are at present under cultivation; but, as yet, little is known of their quality; some of them may prove valuable; and as soon as they are fruited, if worthy of cultivation, will be added to the present list.

Isabella, Catawba, Diana, Concord, Hartford Prolific, Rebecca, Delaware, and Clinton, are all well known, and are now nearly all getting into general cultivation. The following are new varieties:

Wilmington, Cuyahoga, Bullitt or Taylor, and Maxatawny. These are White Grapes, and promise well. The varieties of dark-colored Grapes lately introduced are so numerous that little can yet be said in relation to quality; many of them probably will be well adapted for vineyard culture.

STRAWBERRIES.

| Norway " | 5 00 to 10 " 100 |

There is nothing that adds to the appearance of a country residence so much as a few good Hedges well kept. The Honey Locust for strong outside line fences, is one of the quickest growing plants, and perhaps one of the best for that purpose, being very hardy, and will grow in almost any kind of soil. This plant will be greatly improved in appearance by cutting at midsummer as well as in winter. Osage Orange, Buckthorn, and Privet, require cutting when young, twice through the course of the summer, to get them into proper shape. *Pyrus Japonica* also makes a beautiful hedge, and impregnable; when this is grown and properly cut, it makes a complete protection. For Evergreen Hedges, American Arbor Vitæ is no doubt one of the best plants. Red and White Cedar are sometimes used. Hemlock and Norway Spruce also make beautiful Hedges. The Norway Spruce is now being used for that purpose to a considerable extent. It is not, as has been supposed, difficult to keep in shape; it will stand cutting quite as well as the Arbor Vitæ, and makes a dense and beautiful Hedge. It also makes excellent screens for exposed places, and can be grown for this purpose with little or no cutting.

N. B.—Deciduous Hedge Plants, when first planted, ought always to be cut to within two inches of the ground. Evergreens, if properly planted, will not require any cutting except to make them all of a height on the top. There is, at the present time, over a mile of Hedges at the Elizabethtown Nursery, of various kinds of plants, where specimens can be seen of all sizes.

ORNAMENTAL TREES.

† This species of Birch, when advanced in growth, is inclined to grow with drooping branches, making a very beautiful weeping tree, and being one of the earliest trees to leaf out in spring, makes it a very ornamental and desirable tree for a lawn. The cut leaved variety is also a fine lawn tree.

All the species of Ash are robust, free growing trees, and those marked (*) are very ornamental.

Very conspicuous planted as single trees on Lawns or Pleasure-Grounds, particularly the purple leaved varieties.

‡ A beautiful tree, when left without pruning.

§ Very large leaves when young.

All the species of Poplar are quick growing trees, and well adapted for giving shelter and effect to new grounds destitute of trees, or bleak exposed situations.

|| The different species of Oaks make beautiful Lawn trees; the English is a rapid free growing tree, and holds its leaves late in the season; the Marsh or Pin Oak is also a rapid grower, and makes a fine Pyramidal tree; also, the Over-cup, White, and Chestnut, are all desirable trees.

† This species of Willow is a very rapid grower; a very desirable plant for making shelter in bleak, exposed places.

‡ The first species being a very rapid grower, and growing to a large tree, is well adapted for ornamental ground. The Mahaleb grows freely, and makes a good second size tree, and holds its foliage very late.

Fine shade trees, growing freely in any soil.

SHRUBS AND DWARF ORNAMENTAL TREES.

25 CENTS EACH; WHEN NOTED *, 50 CENTS.

| <i>Zanthorrhiza apifolia</i> | Parsley leaved..... | |

† The several species of Mountain Ash, and its varieties, are very ornamental with their bright red berries through the fall, where they are not subject to the borer.

All of the Spiræas are very desirable for shrubberies, some of them being in flower nearly all the summer.

Reevesii and *Prunifolia* are very conspicuous, fine, hardy shrubs.

Lilacs being early flowering shrubs, are generally found in every shrubbery, and several of the new varieties are beautiful.

† A fine shrub, one of the most desirable in cultivation.

Some new shrubs, not included in this list, are under cultivation, but not yet ready for sale.

MAGNOLIAS.

| BOTANICAL NAMES. | COMMON NAMES. | REMARKS. |
|------------------------------|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Lord Raglan..... | dark crimson. | Prince Leon..... | light rosy crimson. |
| Lady Alice Peel | | Wm. Griffith..... | rosy lilac. |
| | | William Jesse..... | light crimson. |

This class of Roses is well adapted for out-door cultivation, being quite as hardy as the common Garden Rose, and if well established on their own roots, will grow with as little trouble as the latter, and give a succession of flowers the whole season, while the weather remains mild. I would advise those who wish to have good permanent rose bushes of this class, to procure them all on their own roots if possible. Although budding is an easy method of increasing them, they are, nevertheless, far inferior.

BOURBON, TEA, AND BENGAL ROSES.

A few of the following varieties are cultivated for summer flowering.
37½ CENTS EACH.

| NAME. | COLOR. | NAME. | COLOR. |
|-----------------------------|---------------------|--------------------------------|-----------------------------------------------|
| Agrippina..... | dark crimson. | Souvenir de la Mal-maison..... | large blush, one of the finest of this class. |
| Comte de Rombeteau.crimson. | | Safrano..... | fine buff. |
| Hermosa..... | blush, fine double. | Queen..... | fine blush. |
| Henri Plantier | fine cherry red. | White China..... | pure white. |
| Louis Philippe..... | purple crimson. | | |
| La Paetol..... | yellow. | | |
| Lady Channing..... | dark purple. | | |

MOSS ROSES.

50 CENTS EACH.

| NAME. | COLOR. | NAME. | COLOR. |
|-------------------------------------|--------|-----------------------|-------------------------------------------------------------------------------|
| Common Red Moss.. | | Princess Adelaide.... | a very free bloomer, fine rosy blush—one of the best for general cultivation. |
| Duchess de Muranais.white. | | | |
| Luxembourg Moss...dark semi-double. | | | |
| Old White Moss.blush white. | | | |

A stock of the common Red Moss and Princess Adelaide at \$4.50 per dozen. Also a number of other kinds, some of them desirable to make up a variety, otherwise of little merit. The old Red and Princess Adelaide are two of the best.

NOISETTE, PRAIRIE, AND OTHER RUNNING ROSES,

Suitable for covering Arbors, Trellis, Fences, &c.

37½ CENTS EACH.

| | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|-----------|
| Aimée Vibert..... | pure white, free flowerer. | } Tender. |
| Lamarque..... | fine white, free grower. | |
| Solfataire | yellow, habit of Lamarque. | |
| Cloth of Gold..... | pure yellow. | |
| Belmonte..... | like the Daily, blooms freely. | |
| Double White Ayrshire..... | white cluster, rapid runner. | |
| Greville Rose..... | large clusters. | |
| Russell's Cottage..... | free flowerer. | |
| Purple Boursault..... | purple, vigorous grower. | |
| Blush “ | double, “ “ | |
| Amadis “ | crimson, very free bloomer. | |
| Inermis “ | pink. | |
| The varieties of Boursault are rapid growers, and make a fine appearance when trained to poles; they come in bloom a little before the ordinary season of roses. | | |
| Madame d'Arblay | white cluster. | |
| Champney Cluster..... | pink. | |
| Noisette Pink..... | free flowerer in summer. | |
| Multiflora..... | blush, a little tender. | |
| “ var. Laura de Voost..... | hardy and fine. | |
| Double Red Sweet Briar..... | | |
| Single “ | | |
| Prairie Queen*..... | fine, free, rapid grower. | |
| Baltimore Belle*..... | blush clusters. | |
| Superba*..... | pale blush. | |
| Perpetual Pink*..... | | |

* There are several other varieties of the Prairie; the Queen and Baltimore Belle are two of the best.

YELLOW ROSES.

| | |
|----------------------|---------------|
| Yellow Harrison..... | bright yellow |
| Yellow Persian..... | deep yellow. |

The best season for removing trees from the Nursery is from the beginning of October until December, and in the spring from March to May; and, as regards the transplanting of trees, my own practice has been to transplant all hardy fruit and deciduous ornamental trees in the fall, when time would permit; otherwise, as early in the spring as the season and weather will allow.

The Proprietor will cheerfully give every information to beginners, and those who are unacquainted with fruits; and when the selection is left to himself, he will endeavor to select such kinds as will give satisfaction.

RE For a full list of Fruit and Ornamental Trees, Shrubs, Roses, &c., see general catalogue.

W. R. respectfully invites Nurserymen and dealers in Trees to visit the Nursery and examine his stock.

N. B. Trees will be carefully packed for shipping and inland transportation, and will be forwarded by whatever route or conveyance the parties may designate. They will, however, after being delivered into the hands of the forwarders, be at the risk of the purchaser.
